- **Course:** UI/UX Design Fundamentals
- **Instructor Name:** Nagaveena
- **Institution:** Christ University
- **Date of Submission:** 13/08/2025

2. Abstract

This project focuses on designing a simple and responsive recipe blog using HTML and CSS. The main goal is to create a user-friendly layout that clearly and attractively displays various recipes. The blog has sections for ingredients, cooking steps, and images, all organized with semantic HTML tags. CSS handles the layout, colors, and responsiveness for different screen sizes. The responsive design ensures accessibility across multiple devices. This project improved skills in basic web design, layout planning, and responsive styling.

3. Objective

- Make a simple and easy-to-use recipe blog page using basic HTML and CSS.
- Create a website that looks good and works well on phones, tablets, and computers.
- Show recipes with pictures, ingredients, and easy-to-follow steps.
- Use only CSS to style and arrange the website, without any JavaScript.
- Make sure the text is easy to read and the site works well for everyone.

4. Scope Of Project

- A homepage showing popular recipes and different recipe categories.
- Detailed pages for each recipe with a list of ingredients, step-by-step instructions, and cooking time.
- Ability to search for recipes and filter them by type or ingredients.
- A contact page where users can send feedback or questions.
- A responsive design that works well on phones, tablets, and computers.

5. Tools & Technologies

| Tools | Purpose |
|---------|-------------------------------|
| HTML5 | Structuring the web content |
| CSS3 | Styling and layout management |
| VS Code | Code editing |

6. Html Structure Overview

- Used semantic HTML5 tags like <header>, <nav>, <main>, <section>, <article>, and <footer>.
- Organized content into reusable recipe cards for easy updates.
- Navigation includes anchor links for smooth scrolling between sections.
- Ingredients and cooking steps are presented in ordered and unordered lists for better readability.
- <header> – Contains the blog logo and main navigation menu.
- <nav> – Links to Home, Recipe Categories, About Us, and Contact pages.
- <main> – Displays featured recipes, recipe listings, and search functionality.
- <section> – Divides recipes into categories such as Breakfast, Lunch, and Desserts.
- <article> – Holds individual recipe details, including images, ingredients, and preparation steps.
- <footer> – Provides contact details, social media icons, and copyright information.

7. Css Styling Strategy

- External CSS – All styles written in a separate style.css file for easy management.
- Modularity – CSS code is well-organized and commented for clarity and maintenance.
- Layout – Used Flexbox to create responsive recipe cards that adjust smoothly on different screen sizes.
- Media Queries – Applied to make the design work well on mobiles, tablets, and desktops.
- Color Palette – Warm, appetizing colors like orange, green, and beige to suit the food theme.

- Typography – Clean, easy-to-read fonts such as Nunito and Lato for better user experience.
- Hover Effects – Added subtle highlights on recipe cards to make the interface more interactive.
- Consistency – Reusable CSS classes ensure a uniform look across the whole website.

8. Key Features

- Responsive Design – Layout adjusts smoothly to all screen sizes.
- Recipe Cards – Each card shows images, ingredients, and cooking steps clearly.
- Navigation – Simple menu for easy and smooth browsing.
- Readability – Clear fonts and good color contrast for easy reading.
- Static Blog – Built with pure HTML and CSS; no JavaScript or dynamic content.

9. Challenges Faced And Solutions

| Challenge | Solution |
|---|---|
| Making recipe cards responsive on all devices | Used Flexbox along with media queries to adjust layouts smoothly across screen sizes |
| Preventing images from stretching or distorting | Applied max-width and max-height limits and used CSS object-fit to keep images proportional |
| Long ingredient lists cluttering pages | Created scrollable sections and added spacing for better readability |
| Ensuring text is readable over photos | Added semi-transparent backgrounds behind text for improved contrast |
| Simplifying navigation for better usability | Designed clear, easy-to-use menus with keyboard accessibility |
| Reducing page load time with many images | Compressed images and implemented lazy loading to speed up page performance |

10. Sample Code

12. Outcomes

- Successfully created a clean, responsive, and user-friendly Recipe Blog using only HTML5 and CSS3.
- The website displays recipe content effectively on all device sizes.
- Strengthened understanding of semantic HTML and responsive CSS design.
- Delivered a visually engaging blog layout with no reliance on JavaScript or backend technologies.

13. Future Enhancement

- Add JavaScript for search, filtering, or recipe submission features
- Integrate backend for dynamic content management
- Implement user accounts and comments on recipes
- Enhance UI with animations and interactive elements
- Improve accessibility features for all users

14. Conclusion

This Recipe Blog mini project provided practical experience in front-end web design using pure HTML and CSS. The project reinforced essential UI/UX principles like responsive layout, semantic structure, and content clarity, providing a solid foundation for future web development projects. With an organized structure, consistent styling, and a focus on user experience, the website meets its objectives and offers a strong foundation for future enhancements such as user accounts, video tutorials, and advanced recipe sharing option.
